Student Exam Scores Data Insights with PySpark

Sai Puneeth Pogula Priyanka Kurimilla
Sai Teja Mallineni Navya Ravipati

December 2023

1 Project Description

This dataset includes scores from three test scores of students at a (fictional) public school and a variety of personal and socio-economic factors that may have interaction effects upon them.

This dataset is fictional and should be used for educational purposes only.

There are a few attributes in the datasets:

1. **Gender:** Gender of the student (male/female).

2. **EthnicGroup:** Ethnic group of the student (group A to E).

3. **ParentEduc:** Parent(s) education background (from some high school to master's degree).

4. **LunchType:** School lunch type (standard or free/reduced).

5. **TestPrep:** Test preparation course followed (completed or none).

6. **ParentMaritalStatus:** Parent(s) marital status (married/single/widowed/divorced).

7. **PracticeSport:** How often the student practices sport (never/sometimes/regularly)).

8. **IsFirstChild:** If the child is the first child in the family or not (yes/no).

9. **NrSiblings:** Number of siblings the student has (0 to 7).

10. **TransportMeans:** Means of transport to school (school bus/private).

11. **WklyStudyHours:** Weekly self-study hours (less than 5 hrs; between 5 and 10 hrs; more than 10 hrs).

12. **MathScore:** Math test score (0-100).

13. **ReadingScore:** Reading test score (0-100).

14. **WritingScore:** Writing test score (0-100).

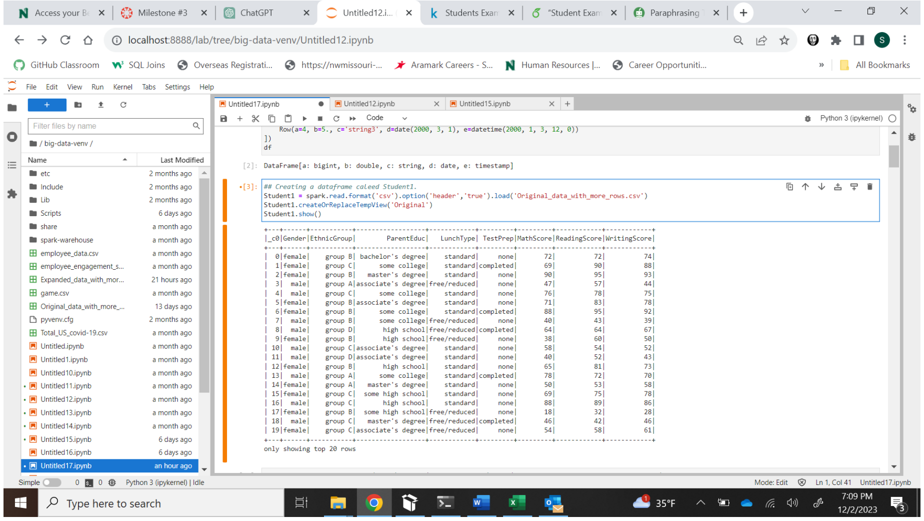
Here, all those attributes that I am using to find out data offer insights into the academic performance of the students and the different elements that may affect it.

I am using PySpark SQL query technologies to find out each student's performance in different sectors like TestPrep and Ethnic Group.

2 Results Summary

There are results of the goals:

Goal 1: Creating the dataframe



localhost:8888/lab/tree/big-data-venv/Untitled12.ipynb

```
    Row(a=4, b=5., c='string3', d=date(2000, 3, 1), e=datetime(2000, 1, 3, 12, 0))
])
df
```

```
[2]: DataFrame[a: bigint, b: double, c: string, d: date, e: timestamp]
```

```
[3]: ## Creating a dataframe caleed Student1.
Student1 = spark.read.format('csv').option('header','true').load('Original_data_with_more_rows.csv')
Student1.createOrReplaceTempView('Original')
Student1.show()
```

```

[60]:

```
##Goal 6 : Observing how the mode of transportation to school relates to weekly study hours drawing a graphs using matplotlib.

# Spark SQL query to analyze the impact of family-related factors on academic performance
family_impact_query = ("""
    SELECT
        ParentMaritalStatus,
        COUNT(MathScr) AS CNTMathScore,
        COUNT(ReadingScr) AS CNTReadingScore,
        COUNT(WritingScr) AS CNTWritingScore
    FROM Expanded
    WHERE ParentMaritalStatus IS NOT NULL
    GROUP BY ParentMaritalStatus
""")

# Execute the query
family_impact_result = spark.sql(family_impact_query)

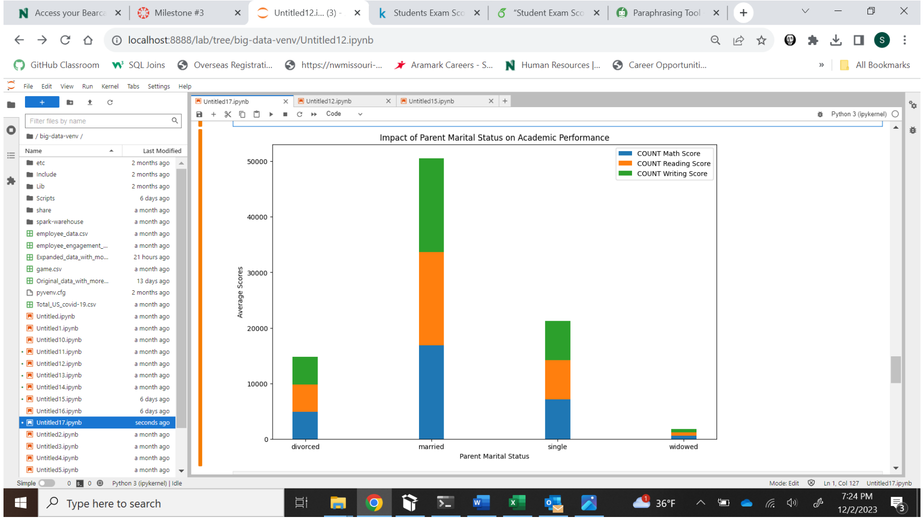
# Convert the result to a Pandas DataFrame for Matplotlib
family_impact_df = family_impact_result.toPandas()

# Plotting the bar chart using Matplotlib
import matplotlib.pyplot as plt

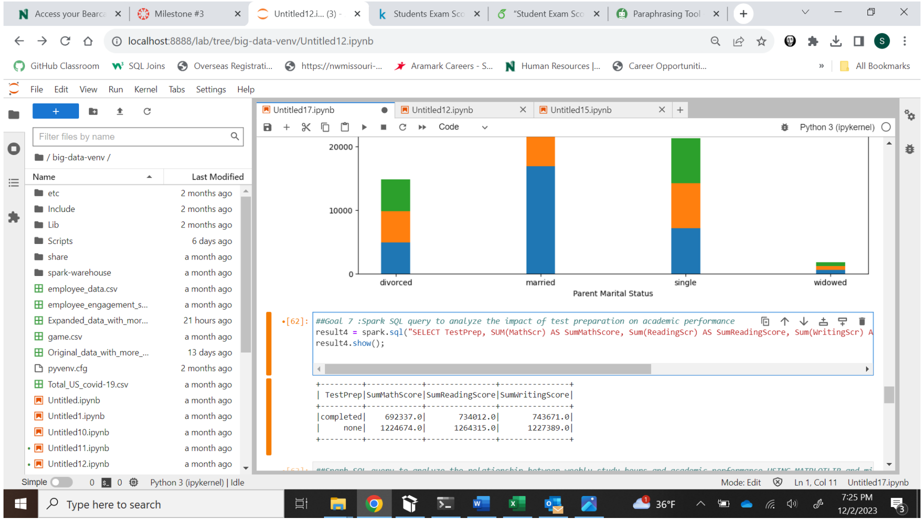
plt.figure(figsize=(12, 8))
bar_width = 0.2
index = range(len(family_impact_df))

plt.bar(index, family_impact_df['CNTMathScore'], width=bar_width, label='COUNT Math Score')
plt.bar(index, family_impact_df['CNTReadingScore'], width=bar_width, label='COUNT Reading Score', bottom=family_impact_df['CNTMathScore'])
plt.bar(index, family_impact_df['CNTWritingScore'], width=bar_width, label='COUNT Writing Score',
        bottom=family_impact_df['CNTMathScore'] + family_impact_df['CNTReadingScore'])

plt.xlabel('Parent Marital Status')
plt.ylabel('Average Scores')
plt.title('Impact of Parent Marital Status on Academic Performance')
plt.xticks(index, family_impact_df['ParentMaritalStatus'])
plt.legend()
plt.show()
```



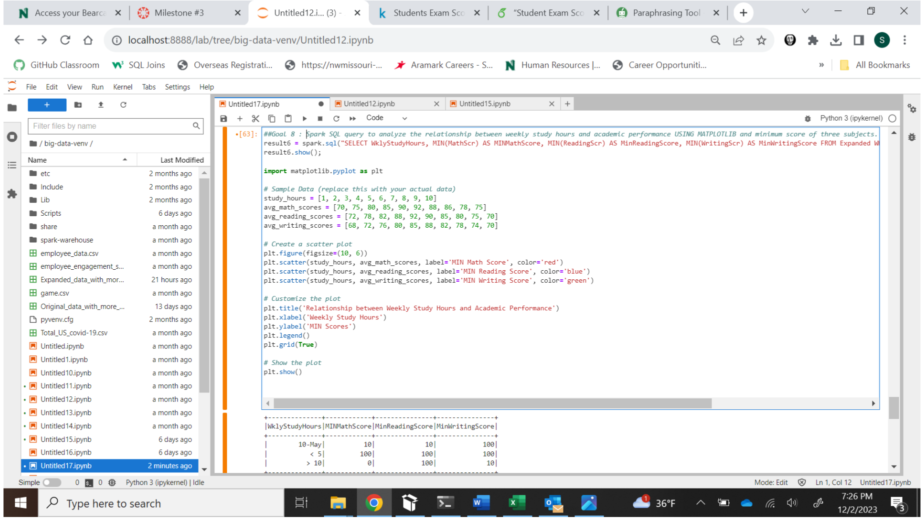
Goal 9 : Determine if students who completed test preparation performed better.



```
[62]: ##Goal 7 :Spark SQL query to analyze the impact of test preparation on academic performance
result4 = spark.sql("SELECT TestPrep, SUM(MathScr) AS SumMathScore, Sum(ReadingScr) AS SumReadingScore, Sum(WritingScr) A
result4.show();
```

```
+---------+------------+---------------+---------------+
| TestPrep|SumMathScore|SumReadingScore|SumWritingScore|
+---------+------------+---------------+---------------+
|completed|    692337.0|       734012.0|       743671.0|
|     none|   1224674.0|      1264315.0|      1227389.0|
+---------+------------+---------------+---------------+
```

Goal 10 : Observing the relationship between weekly study hours and academic performance and also drawing a graphs between weekly study hours and academic performance using matplotlib.



```
##Goal 8 : Spark SQL query to analyze the relationship between weekly study hours and academic performance USING MATPLOTLIB and minimum score of three subjects.
result6 = spark.sql("SELECT WklyStudyHours, MIN(MathScr) AS MINMathScore, MIN(ReadingScr) AS MinReadingScore, MIN(WritingScr) AS MinWritingScore FROM Expanded W
result6.show();

import matplotlib.pyplot as plt

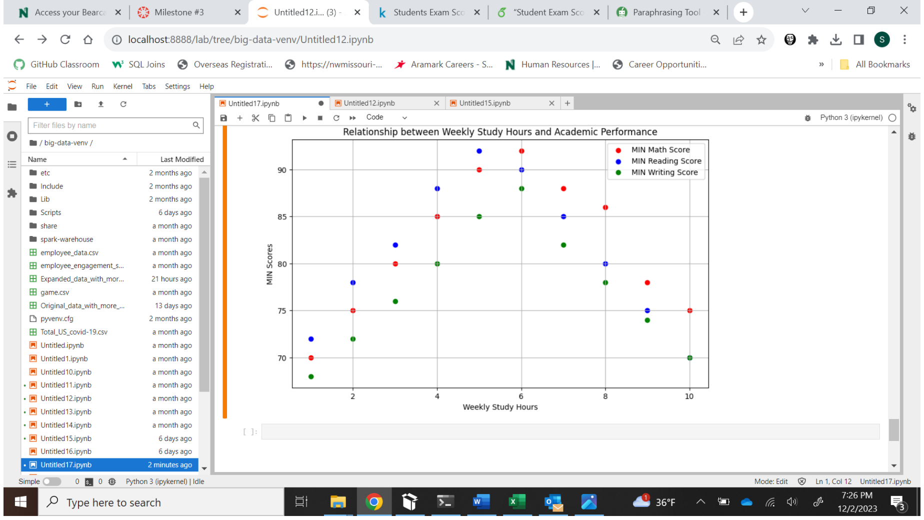
# Sample Data (replace this with your actual data)
study_hours = [1, 2, 3, 4, 5, 6, 7, 8, 9, 10]
avg_math_scores = [70, 75, 80, 85, 90, 92, 88, 86, 78, 75]
avg_reading_scores = [72, 78, 82, 88, 92, 90, 85, 80, 75, 70]
avg_writing_scores = [68, 72, 76, 80, 85, 88, 82, 78, 74, 70]

# Create a scatter plot
plt.figure(figsize=(10, 6))
plt.scatter(study_hours, avg_math_scores, label='MIN Math Score', color='red')
plt.scatter(study_hours, avg_reading_scores, label='MIN Reading Score', color='blue')
plt.scatter(study_hours, avg_writing_scores, label='MIN Writing Score', color='green')

# Customize the plot
plt.title('Relationship between Weekly Study Hours and Academic Performance')
plt.xlabel('Weekly Study Hours')
plt.ylabel('MIN Scores')
plt.legend()
plt.grid(True)

# Show the plot
plt.show()
```

```
+--------------+------------+---------------+---------------+
|WklyStudyHours|MINMathScore|MinReadingScore|MinWritingScore|
+--------------+------------+---------------+---------------+
|        10-May|          10|             10|            100|
|           < 5|         100|            100|            100|
|          > 10|           0|            100|             10|
+--------------+------------+---------------+---------------+
```



3 Conclusion

We can conclude for this project that we can calculate the average scores in Math, Reading, and Writing to get an overall understanding of the students' performance where reading score average is highest while compare to other mathscore and writingscore and also Investigate whether the level of parental education has an impact on student scores and in various elements.
